

# Feasibility Licence Management Plan Production and Delivery

## The Challenge

Management Plans are a critical document for the OIR to assess, monitor and control activities in OIE licence areas. They interface with several other approvals, regulations, licence holder and contractor management systems and therefore can be challenging to deliver a fit for purpose, quality document that can be approved and implemented without delay.

For the feasibility licence they are a critical path approval to enable metocean and geotechnical site investigations. Therefore, finding the balance between detail/effort for timely submission and risk delays due to rework and resubmission after initial OIR review is crucial.

## Why Energise?

As the Management Plan is an offshore licence area focused document with the OIR as the intended reader, we will draw on our team's experience in delivering the required activities (Site investigations) in Australia and globally combined with experience working offshore in Australia under the OIR/NOPSEMA regulatory regimes.

We will draw on our teams knowledge of the OIR/NOPSEMA expectations and close relationships through our Head of WA and Environment Lead, Raquel Carter who was previously Chief Environmental Scientist at NOPSEMA.

This approach will ensure the required controls and flexibility needed for an effective but executable Management Plan is developed. We believe that Energise is a perfect partner to draft your Feasibility Licence Management Plan on your behalf.

## OUTCOME

A fit for purpose Management Plan that is approved first time with the right balance of flexibility inbuilt to achieve approval and keep operational flexibility to delivery project.
