

Specialised Clean Energy and Infrastructure Consultancy

Energise Capability Statement

energise-renewables.com

Energise is a specialised clean energy and infrastructure consultancy delivering practical, high-value solutions across the full project lifecycle. We support developers, investors, and government to navigate complex technical, commercial, environmental and regulatory challenges across renewable energy, marine and coastal infrastructure, and broader energy systems.

Leadership

Energise was founded by leaders in the energy industry in 2023 and is led by partners Jonas Jacobsen and Tim Carter, who continue to drive the company's strategic direction and growth.

Jonas Jacobsen

- More than 22 years global experience in infrastructure and renewable energy including 8 years of offshore wind experience from Australia, Vietnam, Korea, India, Taiwan, & New Zealand.

- Focus on technical development of all generation and transmission assets. Extensive technical development experience including project definition, supply chain engagement, and grid connection.

Tim Carter

- 20 years working at the interface between marine science, environmental impact assessment (EIA) and regulatory decision making.

- Demonstrated ability to develop pragmatic environmental management solutions, for complex marine development projects.

Our Advantages

- Integrated service offering across technical, environmental, commercial and stakeholder disciplines.
- Deep regulatory insight with experience working within and alongside government frameworks.
- Strong marine and environmental expertise delivering risk-proportionate, decision-focused studies
- Proven experience in structuring projects to progress through approvals, funding, and delivery.
- Unparalleled blend of local and international experience across energy and infrastructure sectors
- Proven track-record for establishing governance frameworks and delivery structures that attract investment and improve project certainty.
- Extensive network of specialist partners and suppliers to support scalable delivery.
- Proven track record working collaboratively with government agencies as a trusted advisor.

Our Track Record

- ✓ Demonstrated success in progressing projects through competitive government processes, including grants, tenders, and access schemes, supporting clients to secure critical funding and project milestones.
- ✓ Recognised expertise in environmental and regulatory frameworks, including direct contributions to national guidance and policy development shaping emerging energy sectors.
- ✓ Trusted advisor to private sector clients, providing clear, practical strategies to navigate approvals processes and achieve timely, defensible outcomes.
- ✓ Strong track record delivering complex development and approvals pathways, from early feasibility through to licensing and regulatory determination across energy and infrastructure projects.

Our Services

REGULATORY SUPPORT

INNOVATIVE FUNDING

INTEGRATED PROJECT PLANNING

RISK MANAGEMENT

ROBUST STUDIES

CAPACITY BUILDING

INCLUSIVE DEVELOPMENT

Energise can provide highly specialised services with highly qualified experts delivering high-quality outcomes

Project Development & Delivery

End-to-end support across the project lifecycle, from early-stage development through to execution, ensuring alignment with approvals, engineering, and commercial objectives.

Environmental & Marine Services

Environmental impact assessments (EIAs), advice on scope, design and timing of studies, development of pragmatic monitoring and management plans aligned with regulatory expectations. Specialist capabilities include underwater noise EIA, monitoring and mitigation.

Regulatory & Approvals Strategy

Clear, practical pathways through complex federal and state regulatory frameworks, including mapping of all requirements, strategies to improve efficiency and regulatory engagement to validate approaches.

Technical & Commercial Advisory

Project concept definition, feasibility studies, supply chain engagement, contracting strategies, and market analysis to support robust and commercially viable outcomes.

Risk, Governance & Investment Readiness

Integrated identification and management of technical, commercial, environmental, and regulatory risks, alongside development of governance frameworks, delivery models, and structures that improve decision-making and bankability.

Stakeholder & Community Engagement

Design and implementation of stakeholder engagement plans that support approvals, build social licence, and facilitate project delivery.

Project Controls & Project Management Office (PMO)

Establishment and operation of PMOs, integrating schedule, cost, risk, and reporting frameworks to provide visibility and control across complex projects and portfolios.

Transmission & Infrastructure Planning

Grid connection strategy, land access, and infrastructure planning to enable efficient integration of projects into existing networks.

Our Approach

We focus on delivering practical, fit-for-purpose solutions aligned with regulatory expectations, project objectives, and commercial and operational realities. This means we tailor the development spend to align with budget and need for speed (when should the project start operating). Our approach integrates technical, environmental, and commercial disciplines to support confident decision making.

We build client capability through targeted knowledge transfer and flexible delivery models, ranging from strategic advisory to embedded team augmentation, through to end-to-end project delivery, ensuring the right level of support while strengthening in-house expertise for long-term success.

Our Advantage

Integrated service offering across technical, environmental, commercial and stakeholder disciplines.

Deep regulatory insight with experience working within and alongside government frameworks.

Strong marine and environmental expertise delivering risk-proportionate, decision-focused studies

Proven experience in structuring projects to progress through approvals, funding, and delivery.

Unparalleled blend of local and international experience across energy and infrastructure sectors

Proven track-record for establishing governance frameworks and delivery structures that attract investment and improve project certainty

Extensive network of specialist partners and suppliers to support scalable delivery.

Proven track record working collaboratively with government agencies as a trusted advisor.
